

# remuve™ MOBILE BLANKET & PILLOW DISINFECTION DEVICE

- Designed and developed to tackle an accommodation industry problem
- First mobile process in the world to provide dry disinfection for blankets and pillows
- Spare blankets and pillows in hotels are very rarely disinfected. This enables the process to become part of their regular disinfection process
- Dry, no chemical and no liquid process
- The process is fast **and requires the use of the MK-2+ PRO** to carry out the service
- Welcome your guests with disinfected spare pillows and blankets that are placed in a 'disinfected' bag. (Bags available for purchase)
- Not available for purchase without a remUve™ MK-2+ UVC device. In order for 'disinfection' to be claimed, the UVC device must be a part of the overall process.
